## Drafting a non-chronological report

The Wetlicker - <sup>S</sup>sadly one of the last <sup>L S</sup>species of the ~~Miptaur Wetlicker~~

One of the last hundred species of its kind, the Wetlicker with one even captured in a zoo! is an endangered creature, going to be one of the last

There were sightings of them killed for their legs and blood.

Living in South America, these mammals have decreased <sup>population</sup>

from one hundred thousand to one hundred in 10 years.

It could be possible that there is more hidden on other <sup>islands</sup>. Who knows, maybe there's more hidden in the depths of the world!

## Appearance

The Wetlickers

Humungous legs, which are considered by many biologists as extraordinary. <sup>more powerful than a truck</sup> are considered by

biologists as extraordinary. The Wetlickers usual height is

around 0.7 meters for female wetlickers and 1 meter for a males

These amazing creatures have a life source. With no heart or brain, they seem like one of the <sup>and pronounced A-Ko-Ri</sup> called Achorima (the plant on their head). Just like a regular plant, the dumbest creatures on earth in reality it's the opposite.

Achorima needs nutrients and sunlight. This can be a big advantage. The plants on the top of their head make them camo

Since they will never get tired and it can feed ~~itself~~ on  
flauge in plants and their the reason why they haven't  
easily  
all been hunted yet.

★ These hind legs are not  
any ordinary ones. They can dis-  
play rocks and trees in one kick!

## Diet

With noxious venom flowing through it's veins,  
the Wettlecker is a deadly predator, ready to <sup>any</sup> fast on <sup>an animal</sup>

hutparf <sup>it sees</sup> (pronounced hut-parf). The hutparf <sup>an animal</sup> lives on

the top of many trees, found commonly on the taller

ones. If the Wettlecker were unable to find <sup>its</sup> the delicate

<sup>prey</sup> Hutparf, it would consume any corybaea or birds

nearby to satisfy itself once again. It also has <sup>For hydration</sup>

the Wettlecker has to drink or water from time  
to drink water every hour so it's Achorina can

be time or else the Achorina can die out, putting the  
dehydrated, putting it at a very big risk.

Wettlecker

## A permanent home

Living in the Amazon rainforest, this creature does

this creature would prefer to  
not go off solitary, in fact they live in groups of

The kinglicker, the  
eight, called to lickers. The most strongest and

most ferocious  
fero ferocious one uses it muscular feet to en

create a kind of cave. Taking a day <sup>or two!</sup> ~~massive~~ It carves a hole in a hill perfect hill or mountain's shaping, carving and creating its home. ~~or mountain and begins. Taking a day or two, these~~

If the cave is unstable and too small it would simply roam around with its licker <sup>goes up</sup> until it finds another one. During the night, ~~lickers can abandon the cave if it's not right.~~ During night, they always sleep standing ~~training~~ the big licker will always keep its leg poking out of the cave so ~~their legs as well.~~ When raining, these creatures it can sense if there are any predators nearby. ~~we~~ get a boost (kind of Behaviour

With an alarming presence, this creature is dangerous and aggressive, with no smaller creature daring to fight it.
