

Who am I

I'm the sixth planet from the sun

I have the second most rings compared to everyone

I have wings on either side

They're huge long and very wide

I'm a gass giant and I'm composed of similar gasses

Five point six eight is what my mass is

108,728 km is my polar diameter

-178 degrees is my effective temperature

I have 62 moons and 30 rings

Now read my story again and guess who am I?
